

For funders: the case, on one screen.

Everything a small-grant application asks for, in the order it asks. Print this section and it comes out as a one-page sheet.

PROBLEM	SOLUTION	SCALE	ASK
Interest in science forms before middle school, yet K–3 classrooms average 18 minutes of science a day against 89 of reading, and only 63% of Ohio fifth graders test proficient in science. Kids in under-resourced Central Ohio schools rarely get to build anything before they decide engineering "isn't for them."	High school students design and hand-assemble a two-activity STEM kit with all materials and instructions, then deliver it in person, free, through elementary schools, shelters and community organizations. Zero cost and zero paperwork for the partner.	300 kits delivered to 3 elementary schools and 3 community organizations in Central Ohio (as of Sep 2026), funded by door-to-door fundraising and school events. Goal: 1,000 kits to 10+ schools across Ohio.	Materials money. \$25 makes one kit; \$2,500 makes 100. Sponsorship lets us buy in bulk, cut the per-kit cost, and reach schools outside Columbus. Contact: [[PLACEHOLDER: name]] , futuresparks0@gmail.com .

Program logic model

Built from confirmed facts. Outcomes are what we will measure, not what we claim.

INPUTS	ACTIVITIES	OUTPUTS	OUTCOMES
- Student volunteer hours: design, assembly, delivery - Materials at \$25 per kit - Sponsorships, door-to-door and school-event fundraising - Partner sites: 3 schools, 3 community organizations - Adult advisor: [[PLACEHOLDER: name]]	- Design and test two activities per kit - Hand-assemble kits with all materials and instructions - Take requests from schools and organizations - Deliver in person, free of charge [[PLACEHOLDER: on-site build sessions, if run]]	- Kits delivered: 300 to date; 1,000 goal - Sites served: 6 to date; 10+ schools goal - Students reached: [[PLACEHOLDER: count]] - Cost per kit: \$25	- Short term: students complete a build and answer "Would you want to try engineering again?" [[PLACEHOLDER: % yes, once measured]] - Medium term: partner sites re-request kits [[PLACEHOLDER: repeat-request rate]] - Long term: more students from under-resourced schools choose STEM electives [[PLACEHOLDER: not yet measured]].

Budget transparency

\$25 makes one kit. That is materials only; every hour of design, assembly and delivery is given by students, unpaid.

Where a kit dollar goes: materials [\[\[PLACEHOLDER: %\]\]](#), packaging and printing [\[\[PLACEHOLDER: %\]\]](#), delivery fuel [\[\[PLACEHOLDER: %\]\]](#). Overhead: none. Bulk purchasing at 1,000 kits is expected to lower the per-kit cost to [\[\[PLACEHOLDER: \\$ estimate\]\]](#).

Funding to date: door-to-door fundraising and school events, during our pilot phase. Total raised: [\[\[PLACEHOLDER: \\$ total and the dates it covers\]\]](#). No grants yet.

What a gift buys

\$25	1 kit for 1 student
\$250	10 kits, a classroom group
\$500	20 kits
\$2,500	100 kits, roughly one school's worth [[PLACEHOLDER: confirm kits per school]] .
\$10,000	400 kits, about four schools, and the bulk order that lowers the cost of every kit after it

Status and accountability

Future Spark is a student-led initiative based in Columbus, Ohio. [\[\[PLACEHOLDER: legal status line, e.g. "operating under the fiscal sponsorship of X" or "an unincorporated student initiative; gifts are not currently eligible for a charitable tax deduction"\]\]](#).

EIN: [\[\[PLACEHOLDER: EIN, or the fiscal sponsor's EIN\]\]](#) · Fiscal sponsor: [\[\[PLACEHOLDER: sponsor name and link\]\]](#) · Annual summary: [\[\[PLACEHOLDER: link to a one-page summary of kits, sites and spending for the year\]\]](#) · Supervising adult: [\[\[PLACEHOLDER: name, role\]\]](#)
